of Correction

Request for Certificate of Correction Under 37 CFR 1.322

Patent No.: 6,894,715 – May 17, 2005

Eric Harold Henrikson

"Mixing Video Signals For An Audio And Video Multimedia Conference Call"

In accordance with the provisions set forth in 37 CFR 1.322, please issue a Certificate of Correction for the above-identified patent as set forth in Form PTO/SB/44 attached hereto in duplicate.

This correction is required due to an omission by the Office. The Issue Fee Transmittal (PTOL-85B) (copy attached) as submitted on January 28, 2005, clearly names **Lucent Technologies Inc.** as Assignee in Item #3. However, and as shown on a copy of the issued U.S. patent face page (attached), before line (*) **Notice**, line (73) **Assignee: Lucent Technologies Inc.** was omitted along with the corporate address – **Murray Hill, NJ (US)**.

This correction does not involve such change to the patent as would constitute new matter or would require re-examination.

I hereby certify that this correspondence is being deposited in the United States Postal Service as first class mail on the date indicated below in an envelope with sufficient postage addressed to: Commissioner for Patents, P. O. Box 1450, Washington, DC 22313-1450.

(57) ABSTRACT

In a multimedia communications system (100) that supports conference calls that include an audio portion and a video portion, a primary video image is selected from a plurality of video images based on an amount of audio data generated. The amount of audio data is determined by counting a number of audio packets or by counting an amount of audio samples in audio packets (204). A dominant audio participant is selected if the difference in the amount of audio exceeds a predetermined threshold (206). If the difference in the amount of audio does not exceed the predetermined threshold (206), the dominant audio participant may be determined by comparing the loudness or volume for each audio participant (207-212). The primary video image is selected to correspond to the dominant audio participant (208, 214). The primary video image remains constant for a predetermined period of time before the possibility to change (210, 216).
